Thomas Zechariah

Johns Creek, GA| 470-5407910 | thomaszechariah2007@gmail.com | US Citizen

Objective

Computer Engineering major specializing in Computing Hardware & Emerging Architectures (CHEA) and Cybersecurity. Excelling in high-pressure situations with hands-on experience in digital logic design, computer architecture, and a wide range of technical skills.

Education

Georgia Institute of Technology | Atlanta, GA *August 2025 – Present*
Bachelor of Science in Computer Engineering, GPA 4.00 Expected Graduation, May 2029

Skills

Programming: Java, Python (novice), HTML/CSS/JS (novice), Node.js (Novice), SystemVerilog (novice), RISC-V Assembly (novice)
Platforms: Linux (Ubuntu), Windows
Hardware: FPGAs, Breadboards, Sensors, Oscilloscope
Software: VS Code, IntelliJ IDEA, Altera Quartus, SolidWorks, Altium Designer, Logger Pro
Professional Organizations: HyTech Racing, Knack Tutoring
Communication: team meetings, lab reports, presentations (large and small audiences)
Languages: English (fluent), Spanish (Conversational), Malayalam (fluent)

Experience

IVue Robotics | Cumming, GA *February – May 2025*
Web Developer
IVue develops open-source drones and robot platforms.

- Developed multiple frontend features using Vue.js, enhancing the company website's user experience and functionality.
- Collaborated with designers to implement several interactive elements, improving engagement and usability across the site

AMI US Holdings Inc.| Norcross, GA *June – August 2023*
IT Lab Intern / MIS Department
AMI is a leading global provider of foundational firmware and management solutions for computing devices.

- Managed and troubleshooted 50+ company PCs and decommissioned legacy systems, ensuring inventory readiness
- Repurposed parts from 40+ damaged systems and submitted reports to HR regarding inventory, optimizing resource usage
- Configured employee systems to integrate with the corporate network, enabling access to company applications and resources

Projects

SDR JSON Converter | AMI US Holdings Inc. *July – August 2024*
Software Intern
Team based project developing a software tool to convert Sensor Data Records (SDR) into structured JSON

- Wrote 50% of the Python code, utilizing IPMI (Intelligent Platform Management Interface) specifications to interpret SDR fields and determine structure for parsing
- Decoded SDRs at the bit level according to IPMI standards and presented results to AMI executives

Relevant Coursework

Programming Hardware/Software Systems: High and low-level programming in C and MIPS; memory management, data structures, recursion, stack/heap usage, embedded systems programming, and performance optimization

Circuit Analysis: Analysis and design of linear RLC circuits using node/mesh methods, network theorems, phasors, op-amps, frequency response, Bode plots, resonance, power analysis and Laplace techniques

Digital Design Lab: Hands-on design and testing of digital circuits using FPGAs, VHDL, and discrete logic

Activities

HyTech Racing | Electrical Team *September 2025 – Present*

- Assisted in building and testing sensor transceivers with One-Wire & UART protocols and a Teensy microcontroller
- Performed soldering, assembly, and parts management for electrical components
